

Dwire has been on the market since 2013 and now, thanks to our totally renewed product, is leader in the production of diamond wires for multiwire machines.

We produce diamond wire for cutting and squaring of granite, quartzite and marble blocks.

A strong know-how, highly specialized staff able to guarantee support not only in all phases of the production process, but above all in the follow-up phase of the installed product.

A construction technology based on severe and continuously monitoring process to guarantee a product whose main feature is constant performance and high quality.

The product we currently realize - and now a model in the sector - is called EASY20: the main plus is to be a "user friendly" tool, perfectly adaptable to all working conditions not ignoring quality and cutting speed.

All its technical components have been accurately redesigned and realized with careful precision. The plastic coating has been totally reprojected, using high quality raw materials.

EASY20 is the result of a long and hard work based on research and development, continuous and meticulous processing of all data collected by our technicians, and also the result of attention to our customer demands of production needs.

We realized a easy to use wire which guarantees a constant performance: speed, stability and quality. These features helps our customers to plan their production in a systematic and certain way, relying on a very high-end product whose characteristics do not vary from supply to supply.

We provide **diamond wires** to the main granite companies that use multiwire machines of the best manufacturers as **Gaspari&Menotti, Pedrini, Breton, Bidese, Hedel, Simec, Socomac, Nodosafar, Barsanti, BM** and many others.

We are very appreciate by our customers for constance and quality of our productive performance that our product offers, but it's our SUPPORT that stand us out amongst our competitors. Our technicians follow each wire set that we provide, constantly supporting in all cutting operations and offering a 360 degrees assistance.

We offer assistance at all stages of purchase to provide the most suitable product for your processing need. Also in the after-sales phase our technicians constantly visit customers to support and optimise the production performance of the wire.
