STONE – GLASS – CONCRETE – GALVANIC – WOOD – ADVANCED MATERIALS

In the stone industry, Italmecc is the reference company for the High Quality characteristics of its products in the field of Dust Extraction and Water Recycling systems with relative sludge treatment.

The company was founded in 1972 in Schio (Vicenza), an area between Verona and Venice, in the industrialized North-east of Italy, where the most important production centers of the country are located.

The Italmecc brand was born from the combination of two words, **Italian Mechanics** given by the founder Severino Ruaro, son of a long family entrepreneurial tradition handed down for 9 generations in the stone industry.

Italmecc stands out for having given rise to many Technological innovations in the Stone industry: from the revolutionary dust collector mod. "Air 1" with water atomization without the aid of filters of 1982, to the automatic controlled and self-cleaning filtration system of the most modern times.

The company was one of the pioneers in the mass production of lamellar pack water recycling and filtration systems, while in more recent times it has distinguished itself for its innovation, designing an automatic internal combined cycle cleaning system both of the lamella pack of the silo and of its own automatic filter presses.

Italian brand in the stone sector par excellence, Italmecc exports all over the world.

In the collective imagination of more recent times, one of the most iconic Italmecc products remains the monobloc plant called "BluComb" for the recycling and filtration of waste water and the high performance extraction cabin mod. "Air Dry 430" as regards dry dust abatement. Both fully automated and self-cleaning.

Product evolution is the result of a constant, unceasing passion and attention to technology which has kept the company at the forefront of technology for over forty years, self-classifying the machinery as a representation of high quality and the essence of the most genuine made in Italy know-how.

It is no coincidence that Italmecc products have been chosen by the most prestigious companies in the world and by some internationally renowned artists such as "Barry X Ball Studio" in Brooklyn, NY USA.

Italmecc is a Premium brand, in fact when you are faced with any of its products, the perception of the solidity and quality of the product are immediate even to the less attentive eye.

This is another of the characteristics that, over time, has made the brand famous.
